

**Dear Hiring Manager,**

I am excited to apply for the **Systems Engineer - IC1** position at Oracle. With a strong foundation in IT and experience in backend development, database management, and cloud solutions, I am eager to contribute to Oracle's innovative customer support services.

During my tenure at E-growth, I led the development of a large-scale e-commerce platform, managing cross-functional teams and optimizing system performance with **PHP Laravel**. I also held the communication between the team and the client (stakeholder), ensuring alignment with business objectives and delivering updates effectively. At NAIRDC, I developed an OCR model for bilingual text extraction and contributed to an AI chatbot, showcasing my ability to implement cutting-edge technologies. Additionally, my data analysis work at the Ministry of Youth included creating dashboards using **Power BI** to align KPIs with strategic goals.

I am currently advancing my expertise through Oracle's learning platform and plan to obtain **OCI** and **DBA certifications** in the coming weeks. My technical skills include **Oracle Cloud Computing, Microsoft Azure, Python, and MySQL**, with a proven ability to resolve technical challenges effectively.

I am inspired by Oracle's commitment to innovation and inclusion and would be honored to contribute to your team. Thank you for considering my application.

**Best regards,**  
Mohamed Alasmawi
